Project Design Phase
Proposed Solution Template

Date	10 September 2026
Team ID	SWUID2026190374
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employees need a standardized and transparent way to request company laptops, obtain manager approval, validate assets and track fulfillment without repeated manual follow-ups.
2.	Idea / Solution description	Build a ServiceNow-based Employee Laptop Request application using a catalog item, mandatory request fields, Flow Designer approval routing, IT fulfillment tasks, asset/CMDB validation, notifications and lifecycle tracking.
3.	Novelty / Uniqueness	Combines request capture, approval, asset validation, fulfillment and status visibility into one ServiceNow workflow, reducing disconnected email/manual handoffs and creating a traceable request record.
4.	Social Impact / Customer Satisfaction	Improves employee experience by making requests easier and more transparent; reduces IT administrative effort; helps employees receive appropriate devices faster and supports consistent service delivery.
5.	Business Model (Revenue Model)	Internal enterprise service model: no direct customer charge. Value is measured through reduced IT processing effort, fewer manual follow-ups, better asset utilization and improved SLA compliance.
6.	Scalability of the Solution	The design can support additional device categories, multiple approval levels, regional fulfillment teams, integrations with HR/asset systems, dashboards and SLA rules without changing the core request lifecycle.
