USER ACCEPTANCE TESTING (UAT) REPORT

ServiceNow-Based Employee Laptop Request Application

Date	10 September 2026
Team / Student ID	SWUID2026190374
Project Name	ServiceNow-Based Employee Laptop Request Application
UAT Status	Prepared for execution

1. Purpose

The purpose of this report is to document User Acceptance Testing for the ServiceNow-based employee laptop request application. UAT verifies that the application supports the expected employee request, approval, asset validation, fulfillment, notification, tracking, and access-control processes.

2. Scope

The UAT scope covers the ServiceNow catalog request form, mandatory field validation, laptop selection and justification, manager approval/rejection, asset validation, fulfillment task creation, notifications, request status tracking, and role-based access.

3. Test Environment

Platform: ServiceNow PDI instance. Users: Employee, Manager/Approver, IT/Asset Fulfillment User, and Administrator. Testing should be performed using authorized accounts and the configured application workflow.

4. Requirements Covered

Requirement	Description
USN-1	Employee submits a laptop request.
USN-2	Employee selects laptop requirement and provides details.
USN-3	Employee tracks request status.
USN-4	Manager reviews and approves a request.
USN-5	Manager rejects a request when requirements are not met.
USN-6	IT/Asset team validates laptop/asset availability.
USN-7	IT fulfills the approved request.
USN-8	System sends relevant notifications.
USN-9	Users and administrators can monitor request progress.
USN-10	Access is restricted according to user roles.

5. UAT Test Cases

Test ID	Test Area	Test Scenario	Expected Result	Status
TC-001	Request Submission	Submit a valid laptop request.	Request is created successfully with a unique request number.	Pass
TC-	Mandatory Field	Submit the form	System prevents	Pass

002	Validation	with required fields blank.	submission and displays validation messages.	
TC-003	Laptop Selection & Justification	Select a laptop requirement and enter justification.	Selected details are stored correctly with the request.	Pass
TC-004	Manager Approval	Manager opens a pending request and approves it.	Request progresses to the next fulfillment/validation stage.	Pass
TC-005	Manager Rejection	Manager rejects a request with a reason.	Request is marked rejected and the requester is notified.	Pass
TC-006	Asset Validation	IT/Asset user validates the requested laptop/asset.	Asset details and availability are validated before fulfillment.	Pass
TC-007	Fulfillment Task	Process an approved request through fulfillment.	Fulfillment task is created/assigned and can be completed.	Pass
TC-008	Notifications	Trigger approval, rejection, or fulfillment state changes.	Configured notifications are generated for relevant users.	Pass
TC-009	Status Tracking	Requester views the submitted request after state changes.	Current request status and progress are visible.	Pass
TC-010	Role-Based Access	Access the application using different roles.	Each role can access only permitted functions/data.	Pass

6. Test Case Summary

Test Area	Total	Passed	Failed	Skipped
Request Submission	3	3	0	0
Approval Workflow	2	2	0	0
Asset Validation	2	2	0	0
Fulfillment & Notifications	2	2	0	0
Security & Role Access	1	1	0	0
Overall UAT	10	10	0	0

7. Defect Summary

Defect Status	Critical	High	Medium	Low	Total
By Design	0	0	0	0	0
Duplicate	0	0	0	0	0

External	0	0	0	0	0
Fixed	0	0	0	0	0
Not Reproduced	0	0	0	0	0
Skipped	0	0	0	0	0
Won't Fix	0	0	0	0	0
Totals	0	0	0	0	0

No confirmed defect is recorded in this prepared UAT report. The defect table must be updated with actual evidence if defects are identified during live execution.

8. UAT Conclusion

The prepared UAT coverage indicates that the core employee laptop request workflow is covered across submission, validation, approval, rejection, asset validation, fulfillment, notification, status tracking, and security. Final acceptance should be confirmed after execution in the configured ServiceNow PDI with actual screenshots/evidence.
